

UX Audit Report & Marketing Recommendations

TO: Anteneh Yimmam (Project Manager)

PLATFORM: Telegram Mini App (WebView)

DATE: September 8, 2026

SUBJECT: UX Audit Findings & Marketing Growth Suggestions

Executive Summary: An internal UX and usability audit of the Well Circle Mini App demonstrated a clean visual hierarchy and straightforward user journeys. However, a critical navigation failure on email links must be resolved prior to release. Additionally, key marketing and strategic recommendations have been integrated to maximize user acquisition, retention, and community engagement upon launch.

1. Priority UX Audit & Technical Findings

● Critical — Navigation & External Link Failure

- **Observation:** Tapping "Email" on provider pages (e.g., Boston Day Spa) attempts a mailto: link inside WebView, causing a net::ERR_UNKNOWN_URL_SCHEME error screen and locking the Back button.
- **Recommendation:** Intercept external email triggers using Telegram WebApp native handlers. Ensure failed external actions cannot break internal navigation stack.

● High — Provider Handoff & Pricing Transparency

- **Observation:** "Call" initiates dialer successfully, but "Email" breaks app execution. Several listings display blank currency fields or vague "Price on enquiry" text.
- **Recommendation:** Standardize contact flows via in-app inquiry forms or controlled Telegram handoffs. Require partners to supply base starting prices.

● Medium — Interaction Feedback & UI Clarity

- **Observation:** Category filter pills and settings toggles lack sufficient visual contrast when active. Empty community feeds contain unused space without clear direction.
- **Recommendation:** Strengthen active states with accent fills and checkmarks. Implement actionable empty-state CTAs (e.g., "Create First Post", "Browse Circles").

● Medium — Settings Hierarchy & Organization

- **Observation:** Theme, verification, privacy, and integrations options are presented in one continuous, unstructured screen.
- **Recommendation:** Group settings into distinct sections (*Account, Preferences, Privacy, Integrations*) to improve discoverability and reduce scrolling.

2. Strategic Marketing Recommendations

In-App User Research & Feedback Loops

- **Acquisition Survey:** Prompt users with *"How did you hear about us?"* to evaluate marketing acquisition channels.
- **User Intent & Engagement:** Survey users on *"What do you use this for?"* (Finding new people, community engagement, Explore page discovery, tracking events).
- **Product Iteration:** Gather feedback by asking *"What is your experience so far?"* and *"Which service features should we add or remove?"*

Community Building & Event Activation

- **Flagship Events:** Host a signature community event in collaboration with a partner service provider.
- **Diaspora Onboarding:** Prepare dedicated onboarding workflows for incoming diaspora users, including direct WhatsApp group integration.

Automated Direct Outreach

- **Direct Channel Automation:** Establish automated weekly messaging via Telegram Bot, SMS, or Email.
- **Content Focus:** Broadcast announcements regarding upcoming events, new features, and exclusive partner discounts.

On-Ground Growth & Brand Visibility

- **Location QR Codes:** Deploy branded QR codes at partner physical locations for seamless Mini App access.
- **Promotional Merchandise:** Distribute branded merchandise (armbands, bracelets) during events to boost community recognition.
